

Foliodrape® Protect Armrest cover

General Product Description/Intended Purpose

Foliodrape® Protect Armrest cover is made of a two-layer material, a nonwoven material laminated with Polyethylene-film (PE), and features an adhesive strip. They are single-use sterile patient drapes and covers for short-term use for prevention of infection on humans in clinical environment.

Foliodrape® patient drapes and covers are intended to be used as sterile draping of the patient and dedicated inventory in operating theatres and all other surgical environments (e.g. day surgery, ambulance, doctor's surgery).

The main task of drapes consists of the prevention of pathogen entry into the surgical wound. Consequently, the risks of infections and blood-borne diseases are reduced.

The Foliodrape® Products are placed on the market sterile and are in Medical Device Class I.

Application/Indication

Draping is the perioperative process of covering a patient and surrounding areas in the operating theater with sterile drapes and covers to create and maintain a barrier, which protects the wound from the entry of microorganisms. The microorganisms can originate from the patient's skin, the OR, or the healthcare personnel. The aim of draping is to prevent the passage of pathogens between non-sterile and sterile areas. The different layers of hydrophilic nonwoven material laminated with Polyethylene-film act together as a fluid and bacteria barrier and minimize the transmission of micro-organisms. Depending on the procedure for which they are used, the Foliodrape® products usage time will vary from few minutes to several hours of continuous usage.

Reference Numbers

Name of Product	Reference Number	Size of Product

Residual Risks, Contra-Indications and Undesirable Side Effects, Warnings

No contraindications known.

Sterile Device

Do not use when sterile packaging or the product are damaged or were unintentionally opened before use.

Single Use Device

Reusing a single-use medical device is dangerous. Reprocessing devices, in order to reuse them, may seriously damage their integrity and their performance. Information available on request.

Product Disposal

To minimize the risk of potential infection hazards, or environmental pollution, disposable components of Foliodrape® products should follow disposal procedures according to applicable and local laws, rules, regulations and infection prevention standards. All infected waste is recommended to be disposed of by incineration.

Non-contaminated material such as waste paper, packaging and non-sterile but not biologically contaminated materials can be disposed separately. Separate disposal containers should be available where waste is created, so that staff can sort the waste as it is being discarded.

Incident Reporting

For a patient/user/third party in the European Union and in countries with identical regulatory regime (Regulation 2017/745/EU on Medical Devices); if, during the use of this device or as a result of its use, a serious incident has occurred, please report it to the manufacturer and/or its authorised representative and to your national authority.

Product Performance Characteristics

The Foliodrape® range is developed under high-quality standards to ensure safety and infection prevention.

Foliodrape® Protect Armrest cover

All products are free of chlorinated substances such as CMR/PBT/vPvB substances (carcinogenic, mutagenic and toxic to reproduction, etc.). There are no added flame-retardants (like polybrominated bi-phenyls, etc.).

Material Characteristics

Composition	Details
Nonwoven Material:	Hydrophilic PP-spunbond, 30 g/m ² , color: aqua
Film:	Pore-free polyethylene-film, 25 g/m ² , color: aqua
Total Laminate:	Thermobonded, 55 g/m ² , latex-free
Sterilization:	With ethylene oxide gas according EN 556-1 and EN 11135-1
